Description: CDW2 Hardcover with CDROM
Publication Date: October 2002

Overview
Prescott, Harley and Klein's 5th edition provides a balanced, comprehensive introduction to all major areas of microbiology. Because of this balance, Microbiology, 5e is appropriate for students preparing for careers in medicine, dentistry, nursing, and allied health, as well as research, teaching, and industry. Biology and chemistry are prerequisites. The Fifth Edition has been updated extensively to reflect the latest discoveries in the field.

New to This Edition

- Every chapter in the book has been updated to reflect the latest discoveries in microbiology, including information on genomics, host-cell, mechanisms of action, classification, and emerging diseases. The most extensive revision has occurred in the areas of genetics, microbial ecology, and immunology where material has been updated and reorganized to allow for easier use.
- New Economic chapter: Chapter 18. The genetics coverage has been reorganized for clarity and ease of teaching. The genetics section now ends with a completely new chapter on genomics. New Chapter 28 on microorganism interactions and microbial ecology!
- Newly developed art program—much of the art is new or revised! It incorporates color and style consistency throughout so students will easily identify certain topics.
- New critical thinking questions have been added to provide practice in analyzing data, predicting outcomes, and to teach students how to think logically.
- The general organization of the text has been modified to provide a more logical flow of topics and give greater emphasis to microbial ecology.

Features

- Prescott's textbook contains briefer chapters than most books, but more of them (42). Students will find the concise chapters more palatable and less intimidating. Short chapters give the instructor the opportunity to fit the text more closely to the instructor's syllabus. Table flexibility is allowed.
- There is an outstanding pedagogical system including outlines, concepts, key terms, cross-referencing, readings, new critical thinking questions, etc., to help students understand difficult material.
